PART II

Licensure Examination Statistics

The first part of the plan is to assess the patient's current health status. This involves a thorough physical examination and a review of the patient's medical history. The nurse should also consider the patient's psychosocial needs and any potential barriers to care. Once the assessment is complete, the nurse can develop a comprehensive care plan that addresses all of the patient's needs.

The next step is to implement the care plan. This involves providing the patient with the care and interventions that have been planned. The nurse should monitor the patient's response to the care and make any necessary adjustments to the plan. It is important to document all care provided and the patient's response to that care.

The final part of the plan is to evaluate the patient's progress. This involves comparing the patient's current health status to the goals that were established in the care plan. If the patient is making progress, the nurse can continue with the current plan. If the patient is not making progress, the nurse should reassess the patient and revise the care plan as needed.

NCLEX-RN® • NCLEX-PN® Test Plan

This test plan is designed to help you prepare for the NCLEX-RN® and NCLEX-PN® examinations. It provides a comprehensive overview of the content areas that are tested on these exams. The plan is organized into four major content areas: Client Assessment, Client Management, Client Education, and Professional Practice. Each content area is further divided into sub-areas, which are listed in the table below.

The table below provides a detailed breakdown of the content areas and sub-areas. The percentage of the exam that is devoted to each sub-area is also indicated. This information can be used to help you determine which areas you need to focus on most.

It is important to note that this test plan is not intended to be a study guide. It is only a general overview of the content areas that are tested. You should consult the NCLEX-RN® and NCLEX-PN® test plans for more detailed information.

The second part of the plan is to assess the patient's current health status. This involves a thorough physical examination and a review of the patient's medical history. The nurse should also consider the patient's psychosocial needs and any potential barriers to care. Once the assessment is complete, the nurse can develop a comprehensive care plan that addresses all of the patient's needs.

The next step is to implement the care plan. This involves providing the patient with the care and interventions that have been planned. The nurse should monitor the patient's response to the care and make any necessary adjustments to the plan. It is important to document all care provided and the patient's response to that care.

The final part of the plan is to evaluate the patient's progress. This involves comparing the patient's current health status to the goals that were established in the care plan. If the patient is making progress, the nurse can continue with the current plan. If the patient is not making progress, the nurse should reassess the patient and revise the care plan as needed.
